Why Partner with DLC ?

- Platform Specific Black Hawk Expertise
- Veteran Operational Experience
- Fully Integrated Academic-to-Simulator-to-Flight Model
- Custom-Tailored International Programs
- Efficient, Results-Driven Training Design

Our combined expertise in aviation and simulation provides an integrated pathway, bridging academic instruction and simulator application in preparation for live-flight execution.

Together, we produce confident, mission-ready aviators.

DLC Simulators

DLC's Black Hawk full-motion flight simulators allow students to transition quickly from classroom instruction into a full-motion simulator environment. This not only allows students to enter the aircraft prepared, but it maximizes efficiency and safety by providing:

- Immediate application of ground school instruction
- Repetition of complex maneuvers without aircraft risk exposure
- Enhanced emergency procedure proficiency
- Reduced live-flight training time and associated costs
- Increased pilot confidence prior to aircraft entry

TRAIN HARDER SAFER SMARTER

Simulation transforms helicopter training by letting pilots practice emergencies, challenging environments, and critical decision-making in a safe, repeatable setting. The result is faster skill development, lower training costs, and more confident, better-prepared pilots, before they ever leave the ground.

ADVANTAGES

Safety: practice emergencies with zero risk to crew or aircraft.

Cost efficiency: no aircraft wear, no fuel or maintenance costs

Repeatability: run the same scenario until the skill is mastered.

Access: train in any weather, time of day, or geographic location with custom designed scenarios

Measurable progress: objective data for instructors and evaluators.

Reduced environmental impact: fewer flight hours means fewer emissions and less noise.

Why Choose Simulation?

Flight simulation is a force multiplier for any helicopter training program. Pilots can rehearse autorotations, engine failures, degraded visual conditions, and other high-risk scenarios that are unsafe or impractical to practice in the aircraft. Every session is repeatable, measurable, and unaffected by weather or aircraft availability. Simulation reduces fuel, maintenance, and flight-hour costs. It also improves proficiency and safety, so your pilots arrive in the aircraft better prepared and your program delivers more value.

Black Hawk Training

With a focus on Black Hawk Training,
DLC offers comprehensive programs that include:

- Structured Academic Ground School
- Systems & Emergency Procedures Instruction
- Tactical and Operational Scenario Training
- Full-Flight Simulator Integration
